What is Sustainability?

The property of being environmentally sustainable; the degree to which a process or enterprise is able to be maintained or continued while avoiding the long-term depletion of natural resources.

What are the Consumer Trends?

- Consumers still feel they can be the change, but only just. Opportunity for brands to become chosen partners for those consumers looking to make a difference.
- Most popular sustainable behaviours are simple, frugal or healthy.
- Consumers buy staple products sustainably but have red lines and won't compromise on quality or familiarity in the name of sustainability.

Who influences and enables the sustainability pillars in the grocery market?

14 © IGD 2022 Source: IGD Research

Behaviours driven by simplicity and frugality

Returning packaging most popular example of companies partnering with consumers.

Abstinence costs nothing: reducing consumption conserves resources AND money.

Frugality informs meal planning and buying fewer new clothes.

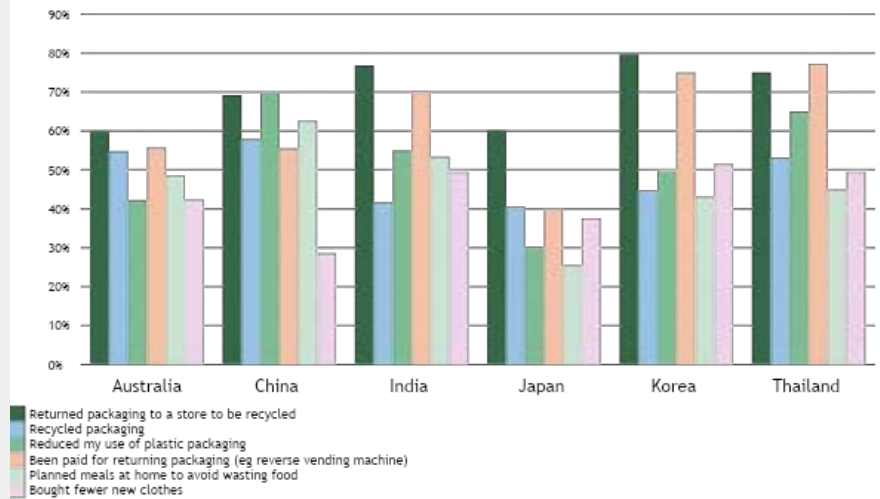

Individuality informs clothing resellers.

Sustainably-minded consumers more likely to agree:

“I have a budget that I try to stick to as much as possible”

“like to stand out from the crowd”.

Most popular sustainable behaviours in past 12 months

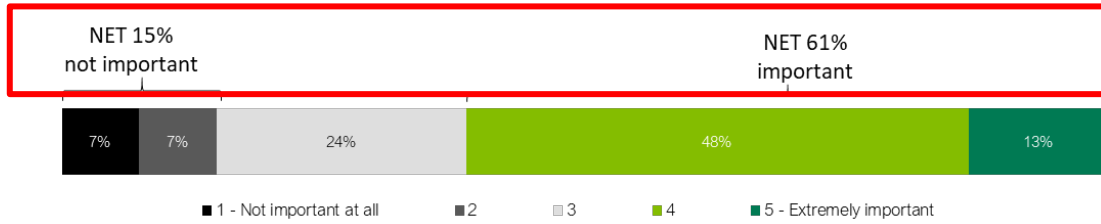

Base: 500 internet users aged 16/64
Source: Dynata/LogicMinds/Mintel March 2021

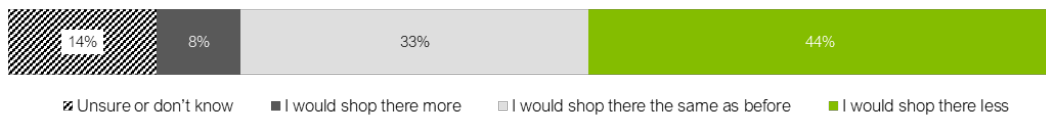

Social Responsibility is increasing in importance to consumer with responsibility falling on governments and business rather than individuals.

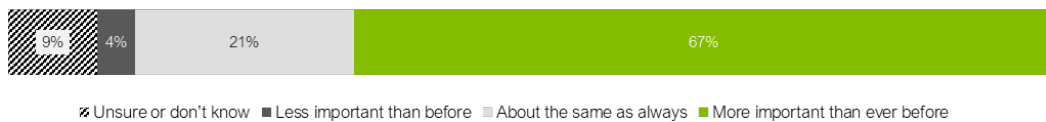

Importance of retailer's track record in sustainability

Composting helps to divert food waste from landfill. Food rotting in landfill creates methane, a dangerous greenhouse gas. Composting food waste turns them into hummus - a natural fertiliser.

Certified Compostable to stringent Australian Standards AS4736 & Home Compostable AS5810.

Made with renewable cornstarch.
